Hi ,

Congratulations — you have cleared Round 1 of the Valura AI Engineer hiring process. You are shortlisted for Round 2.

Round 2 is a 3-day project assignment. You will build a slice of our AI agent ecosystem and submit both a codebase and a defence video.

Rules

1. Hard deadline: 5 May 2026, 11:59 PM IST. No exceptions, no extensions.
2. You must submit both the codebase and a defence video link. Missing either one = automatic rejection.
3. Defence video must be ≤ 10 minutes. Anything longer is auto-rejected.
4. Submit via the Google Form below — only one submission per candidate, and the form auto-closes at the deadline.
5. Read `ASSIGNMENT.md` in your repository in full before writing any code.
6. Commit incrementally — we read your git log. A single final dump is disqualifying.
7. Tests must pass with `pytest tests/ -v` and must not require an `OPENAI_API_KEY` (mock the LLM).

Links

1. Get your assignment (click to accept and create your private repo):

<https://classroom.github.com/a/SHM9MYZJ>

2. Submit your work (GitHub repo URL + video URL):

<https://forms.gle/ruqJWgwSXyA94y728>

3. Join our Discord for clarifications and announcements:

<https://discord.gg/KfnbVguupK>

What to do now

1. Click the GitHub Classroom link → accept the assignment → your private repo is created
2. Read `ASSIGNMENT.md` end to end
3. Build, test, record your defence video
4. Submit the Google Form before 5 May 2026, 11:59 PM IST

Good luck. We're looking forward to seeing what you build.
